Background

The European Joint Programming Initiative for Agriculture, Food Security and Climate Change (FACCE JPI) commenced the MACSUR SciPol project as a pilot to improve the usability of scientific evidence for strategically designing a response to climate change adaptation and mitigation challenges in the agri-food sector in Europe. With transdisciplinary and modelling approaches, the SciPol pilot generated key lessons in establishing and operationalizing a science-policy knowledge forum. The core output of the MACSUR SciPol is lessons learned in providing science-based response to policy questions that proved operational in exemplary cases related to mitigation and adaptation measures, their impact, synergies, and trade-offs.
